Stability	: T	he product is stable if stored and handled as prescribed.
Hazardous Polymerization	: W	/ill not occur.
Conditions to avoid		eep away from oxidizing agents and open flame. To avoid thermal ecomposition, do not overheat.
Incompatible Materials	oı pı de m qı	void contact with strong oxidizers. Also, avoid contact with acetal cacetal copolymers and with amine containing materials during rocessing. At processing conditions, these materials are mutually estructive and involve rapid degradation. Thoroughly purge and techanically clean processing equipment to avoid even trace tantities of these materials from coming in contact with each other. revent cross contamination of feedstocks.
Hazardous decomposition products	() sr or °(	arbon dioxide (CO2), carbon monoxide (CO), oxides of nitrogen NOx), hydrogen chloride (HCl), other hazardous materials, and noke are all possible. Prolonged heating (approximately 30 minutes r more) above 392 °F (200 °C) or short term heating at 482 °F (250 C) may result in product decomposition and evolution of carbon ionoxide and hydrogen chloride.
